Currently on Connecticut, USA

bhattaraiyogesh007@gmail.com

EXPERIENCE

TAKEO Pvt Ltd, St Suite 1120, New York,— *Full Stack React Developer*

AUG 2022 – Dec 2022

With a certain experience in the field of Front end and Back end Development I was given the opportunity of providing support to my fellow developers from across the world working on Lowes, Walmart, United Airlines, ADP and many other.

AITC Pvt Ltd, Bhaktapur— *Front End Developer*

JAN 2022 – AUG 2022

Learning and creating the most valuable designs and developing cutting-edge services to make the digital world a little better for all people.

Digital Nepal, Kathmandu— *Front End Developer*

AUG 2021 – DEC 2021

With an eagerness to learn more about the field of work, I was looking for a perfect place where I could contribute something to the society I live in that is why I came to work with Digital Nepal.

KaaiKaas Technologies Pvt Ltd, Lalitpur — *Jr Front End Developer*

JUNE 2019– DEC 2020

The early stages of my life starting and cooperating with the startup made me able to learn new things alongside finishing my starting journey with a bang.

Freedom Franchise, London— *Front End Developer*

Jan 2020– DEC 2020

Launching myself from the ground level to the perfection that i am able to get is a guaranteed outcome of my remote work in Freedom Franchise. I was able to join with many worldwide developers to meet and develop something unique and new for the internet

July 2015

PROJECTS

Bike Rental Application (React JS, Firebase and Firestore)

https://github.com/uniquemozilla22/Bike_rental_System

This application is created by practising the server-side rendering of Next JS which is built with NextJS at the front end and Firebase housing its backend and for the data store, it is using firestorm by Google. This application is a simple chat application where the user can create a chat with any user with an email by tapping on the " START A NEW CHAT " button on the sidebar.

Chat Application (Next JS, Firebase and Firestore)

https://github.com/uniquemozilla22/nextjs-whatsapp

This application is created by practising the server-side rendering of Next JS which is built with NextJS at the front end and Firebase housing its backend and for the data store, it is using firestorm by Google. This application is a simple chat application where the user can create a chat with any user with an email by tapping on the " START A NEW CHAT " button on the sidebar.

Art Gallery Client & Supplier (React JS) - *AITC Pvt Ltd*

Client Panel - https://github.com/uniquemozilla22/art_ecommerce_frontend_react

Supplier Panel- *https://github.com/uniquemozilla22/art_gallery_ecommerce_supplier*

Art Gallery is a web application that is intended to provide a complete solution keeping in regard to the vendors as well as the customers wanting/visiting the art gallery as their need for the art purchase and sell. This platform is created intending the customers to provide an alternative yet reliable way to purchase the art and the vendors give a perfect platform to sell their art dynamically.

communicate with them in the chat section of the application which enables us to achieve the main purpose of the application, doctor consultation. The other thing could be that the users can book the appointment for a specific day for a specific field which could help us in achieving the management of the crowd in the hospital.

Restaurant Management System (React Native, TypeScript, Node jS)

https://github.com/uniquemozilla22/RMS

A management system that will help the restaurant owners, receptionists, staff, chefs, customers and many other ends relating to the restaurant. This system is built on MERN Stack with React Native on the front end. On com.pletion, it will help the restaurant to get the financial services with the lowest margin and will be able to focus on their food rather than management, which will be done entirely by the application.

Shally Web Design (React Js) – *Digital Nepal Pvt Ltd*

https://github.com/uniquemozilla22/Shally_web_design

This is a web template that was made for more practice on react and design aspects.

Todo Application (Java Android)

https://github.com/uniquemozilla22/TodoApplication_android

This is a Todo Mobile Application that uses Firebase to authenticate and SQLite for recording the tasks given by the user. The application is made on Android Studio using API 30.

Application to compile and draw the shape in canvas (C#)

https://github.com/uniquemozilla22/Code_line_to_Draw

This application was an initial build of learning new things at the early stages of my life. This application was built on c# which takes the input in a corrected format that will show the shapes with different colours on the canvas.

Weather App (React Js)

https://github.com/uniquemozilla22/WeatherApp_API

This is the React Application that uses an external API to fetch the data and show it in the application. This is the application made for a personal project it gets and receives the data.

Application to compile and draw the shape in canvas (C#)

https://github.com/uniquemozilla22/Code_line_to_Draw

This application was an initial build of learning new things at the early stages of my life. This application was built on c# which takes the input in a corrected format that will show the shapes with different colours on the canvas.
